Attention-Deficit / Hyperactivity Disorder (ADHD)

F90.2 (Combined) / F90.0 (Inattentive) / F90.1 (Hyperactive-Impulsive)

A persistent pattern of inattention and/or hyperactivity-impulsivity that interferes with functioning or development. For older adolescents and adults (age 17+), at least 5 symptoms are required per domain; for children, at least 6 are required. Symptoms must persist for at least 6 months.

Criterion A1: Inattention

Requires ≥ 5 symptoms for adults (age 17+) or ≥ 6 for children for at least 6 months

- ☐ A1a: Often fails to give close attention to details or makes careless mistakes in schoolwork, at work, or during other activities (overlooks/misses details, work is inaccurate).
- ☐ A1b: Often has difficulty sustaining attention in tasks or play activities (difficulty remaining focused during lectures, conversations, or lengthy reading).
- ☐ A1c: Often does not seem to listen when spoken to directly (mind seems elsewhere, even in the absence of any obvious distraction).
- ☐ A1d: Often does not follow through on instructions and fails to finish schoolwork, chores, or duties in the workplace (starts tasks but quickly loses focus and is easily sidetracked).
- ☐ A1e: Often has difficulty organizing tasks and activities (difficulty managing sequential tasks; messy, disorganized work; poor time management; fails to meet deadlines).
- ☐ A1f: Often avoids, dislikes, or is reluctant to engage in tasks that require sustained mental effort (e.g., preparing reports, completing forms, reviewing lengthy papers).
- ☐ A1g: Often loses things necessary for tasks or activities (school materials, tools, wallets, keys, paperwork, eyeglasses, mobile telephone).
- ☐ A1h: Is often easily distracted by extraneous stimuli (for older adolescents and adults, may include unrelated thoughts).
- ☐ A1i: Is often forgetful in daily activities (doing chores, running errands; for older adolescents and adults, returning calls, paying bills, keeping appointments).

Criterion A2: Hyperactivity & Impulsivity

Requires ≥ 5 symptoms for adults (age 17+) or ≥ 6 for children for at least 6 months

- ☐ A2a: Often fidgets with or taps hands or feet or squirms in seat.
- ☐ A2b: Often leaves seat in situations when remaining seated is expected (leaves place in office/workplace, classroom, or meetings).
- ☐ A2c: Often runs about or climbs in situations where it is inappropriate (in adolescents/adults, may be limited to feeling restless).
- ☐ A2d: Often unable to play or engage in leisure activities quietly.
- ☐ A2e: Is often 'on the go,' acting as if 'driven by a motor' (uncomfortable being still for extended time, as in restaurants or meetings; perceived by others as restless or hard to keep up with).
- ☐ A2f: Often talks excessively.
- ☐ A2g: Often blurts out an answer before a question has been completed (completes people's sentences; cannot wait for turn in conversation).
- ☐ A2h: Often has difficulty waiting his or her turn (e.g., while waiting in line).
- ☐ A2i: Often interrupts or intrudes on others (butts into conversations, games, or activities; may take over what others are doing).

Criteria B, C, D & E: Chronicity & Context**All must be confirmed for formal diagnosis**

- ☐ **B:** Criterion B: Several inattentive or hyperactive-impulsive symptoms were present prior to age 12 years.
- ☐ **C:** Criterion C: Several symptoms are present in two or more settings (e.g., home, work/school, with friends or relatives, in other activities).
- ☐ **D:** Criterion D: Clear evidence that symptoms interfere with or reduce the quality of social, academic, or occupational functioning.
- ☐ **E:** Criterion E: Symptoms do not occur exclusively during schizophrenia or another psychotic disorder and are not better explained by another mental disorder.

CLINICAL SPECIFIERS & SUBTYPES**Presentation:**

- ☐ Combined presentation (F90.2)
- ☐ Predominantly inattentive presentation (F90.0)
- ☐ Predominantly hyperactive/impulsive presentation (F90.1)

Current Severity:

- ☐ Mild (few symptoms beyond threshold, minor functional impairment)
- ☐ Moderate (symptoms/impairment between mild and severe)
- ☐ Severe (many symptoms in excess of required cutoff, marked occupational/social impairment)

Remission Status:

- ☐ Full criteria met
- ☐ In partial remission

Diagnostic Conclusion & Medical Decision Making (MDM):

- ☐ Full Diagnostic Criteria Met ☐ Sub-threshold Symptoms ☐ Ruled Out (Alternative Differential Documented Below)
-
